Finding Better Proxies and results !!

What does better mean?
1. Faster
2. More Reliable
3. Stay Alive Longer

1. Firstly in the Options Menu make sure Check All is chosen
What we are actually doing is to check all the Test Sites are !! Alive!
Sometimes they Go Offline

2. Click the Test Button and **Be Patient**
Some Sites do Stick and sit there

I have tried experimenting with "Automatically remove proxies" enables and set it to about 1 minute
My Test Results and Reliability has shot up !!

Remember is Quality not Quantity !!

3. Test All

4. You need to **Disable Failed**
Don't worry, this dosn't Delete them, it just it Unchecks the Dead ones**.**
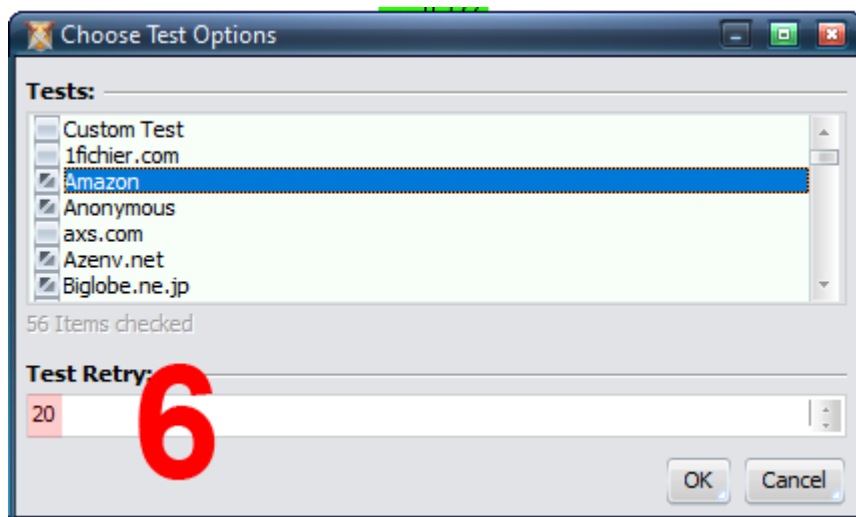

What's Probably happened is that your IP has got banned, I wouldn't worry, life goes on as this is easily fixable.

5. Press Test now so we can Test all of our Loaded Proxies**.**

6. You will now see some Sites are Ticked and some Unticked
These are the Fastest ones or working, Unbanned ones

7. Once You have all of them Tested the Rule is....
The More Colours, the More sites they have Passed on

Don't Forget your Ping / Speed, as this is how Fast the Site Responds back to you.
If you ask somebody a Question, and they take 10 Minutes to respond, you get frustrated.
On the Internet You Get Ping and Pong as for how Fast a Sites responds.
Except, we are in 1000th of a Second, so 1000ms = 1 Seconds
So 1/1000 = 0.001
So the bottom one you see is 156ms, which is pretty fast, I generally go for 200ms Proxies

8. The Reliability Column

As you watch the Reliability column it will change if you choose more than 1 Test Retry, as above in **No.6** Photo
I delete any below 70%, but don't worry, you will always be able to find Proxies.
I also only use Socks 4 and 5 and in all of my Tutorials, you will never see any others.

There are many other Tips, but here are the Basics.

Be careful when using Proxies, ad they are not secure, but by using encrypted connections then this greatly increases your security.

Would you write a password on a piece of paper, then pass it to a stranger to give to a trusted person?
